Sioux Chief 
MANUFACTURING SINCE 1957

Easy Installation

Bracket tub valve and stub out securely behind the wall. (Sioux Chief recommends using Power Bar brackets with TouchDown clamps facing away from front wall.)

Mark the copper stub out even with the line on the underside of the Tug Spout (roughly 2³/₄"). Do not use a plastic stub out ell.

Cut the stub out at the mark and deburr.

Clean the wall thoroughly and let dry. Install the provided Dry Seal Pipe Collar with adhesive foam backing strip. Push the Tug Spout onto the stub out, contacting the wall.

Tighten the screw to secure the Tug Spout snug to the wall. Do NOT overtighten as the wall could become damaged.

Finishes

chrome

oil-rubbed bronze

satin nickel

ANSI/ASME A112.181 (diverter spout)

Clean Installation

Less Caulk, Less Mess

With the Tug Spout, you are left with a clean, secure, and leak-resistant installation without the need to caulk the tub spout to wall. When stubbing out through a fiberglass tub or area void of grout lines, the Dry Seal Pipe Collar will adhere firmly against the smooth surface, preventing moisture from penetrating the wall. If the outer perimeter of the spout comes into contact with an extreme tile depression or grout line, use silicone to create a watertight seal to the wall.
