## SIOUX CHIEF OX BOX

Charles Carter plumbing has been using the ox boxes for quite some time. They like the fact that they only have to carry 1 icemaker and 1 washer box. If they need to add an eliminator box then they will buy the secondary drainage funnel for them. The advantages from an inventory stand point, is the fact they don't have to carry several different types. As far as out in the field the install is easy and this prevents the plumbers from crossing their water lines. This also allows them to put the boxes on the studs because the channel that comes with it. This makes the boxes more stable than the oatey type boxes.
