

SimpleStrap™

»» Stub Out Clamp

Cost Effective

Economical alternative to cutting wood blocks or metal studs for securing stub outs.

Versatile

One clamp supports pipe vertically or horizontally. Nail the galvanized flat support bracket to the face of the stud for horizontal wall penetrations or simply bend one end of the bracket and mount inside the stud cavity to stabilize vertical pipe running between the studs. Available for 1/2" or 3/4" CTS, the SimpleStrap™ is non-corrosive and compatible with Copper, PEX or CPVC.

Better Quality Installations

Scrap wood pulled from jobsite trash piles is typically split, damaged and soaking wet. Wet wood promotes mold growth. Scrap wood has to be measured, cut and then toe-nailed between the vertical studs. The flat support bracket installs quickly and easily with two nails or screws. It is available in different lengths. The longer bracket allows the installer to support two stub outs in separate stud bays. The SimpleStrap clamps onto the bracket without any additional hardware. The brackets are a high-quality galvanized steel that resists rust. Both straps and brackets are Made in the USA.
