Position wide top lip over the back edge to hook onto bracket.

Then align tooth with hole in bracket. Install the clamp from the flat side (face) of the bracket.

Use thumb and push wide lower lip onto bracket to engage the clamp.

Install CTS pipe or stub out into pipe hole opening.

Push thumb tab down and slightly forward to engage both edges of the bracket.

Completed installation.

TAKE THE FIELD.
Use screws or nails to secure bracket to either the front or inside of stud.

Edge brackets are also offered with self-nailing barbs that can be driven directly into wood studs.

CAUTION: Brackets have sharp edges. Wear gloves and use caution when installing the product.

Bend in both tabs to fit the bracket inside the stud bay.

If stud bay is not wide enough, tear perforation on the vortex of the bracket to best fit the opening.
