Subject: FinishLine in Shower Applications

The FinishLine drainage system can provide many of the same installation advantages in a commercial or large residential shower application that it does when installed as a floor drain. However, when using a FinishLine flashing drain in a shower application, be sure to use a model having an ABS Coring Sleeve and Head Adapter, not ductile iron. While the Base Adapter and Clamping Collar can be either material, the appearance of corrosion (rust) on the visible, upper components is likely to be unacceptable in a shower installation. In addition, the constant presence of water can sometimes cause rust stains from an iron Head Adapter or Coring Sleeve to leach into the grout around the strainer.

If there are any questions on this subject or any Sioux Chief Drainage products, please contact me, or call your Regional Sales Manager any time.

Sincerely,

Chris Ismert
Product Group Director – Drainage
